Kaikoura	22*	1
Cheviot	..	5	..	4*	9	3

NOTE.—The figures denote the day of the month on which one or more shocks were felt. Those with the asterisk affixed were described as *smart*. The remainder were only slight tremors, and no doubt escaped record at most stations, there being no instrumental means employed for their detection. These tables are therefore not reliable as far as indicating the geographical distribution of the shocks within New Zealand. The records of the Milne seismographs recently established at Wellington and Christchurch will be found on p. 582 *et seq.*
